# BLOODHOUND
TRACKING DEVICE, INC.

In today's global trade environment, real-time security and visibility are no longer optional; they're essential. Shippers and logistics providers rely on a wide range of tools to ensure cargo arrives safely, securely, and on schedule. The Bloodhound Tracking Device provides supply chain security and optimization through:

Land and Ocean Tracking Example

- **Internal sensors** include CO_2 and ammonia (to detect and report human smuggling) light, shock, temp, humidity, and battery to document the internal condition of the cargo.

- **Photo captures** occur in three bursts when the door is opened-authorized or un-authorized. Photos are presented in real time and stored in a secure archive file for forensic documentation.

- **Event alarms** triggered by internal sensors, always present both time and location notice to the users or other stakeholders, giving immediate actionable information to thwart or deter loss, damage or theft of cargo.

The most effective path forward for trucking companies, rail and ocean carriers, and logistics service providers is full deployment of smart tracking devices across their networks. The **Bloodhound Tracking Device** delivers unmatched cargo and conveyance integrity giving cargo owners peace of mind with real-time visibility and protection. Anything less leaves your assets vulnerable to theft, loss, or damage. Shippers should prioritize carriers who commit to full-network security and visibility.

The New Standard in Supply Chain Security and Optimization

Covert Security device that is not visible from outside the container or trailer	**Monthly lease for the tracking services, no Capex**	**Maintenance, replacement battery and customer/technical service included in the lease rate**
Redundant communications provide global visibility and proof of security	**Long-Lasting Power: Designed to operate for 3+ years**	**Sensors can be preset to support customers requirements**

THE BLOODHOUND TRACKING DEVICE
The Smart Container System is Available Today

|		
GPS, Cellular system, SATCOM, LoRa Network and Disruptive Tolerant Network for Communications	First Global End to End Visibility and Security Service	Single source for all major milestone visibility in the global supply chain
BTD offers real-time visibility into dwell times and asset utilization, empowering smarter operational decisions and improved efficiency.	Shippers and BCOs must drive the carriers to fully implement security and tracking devices	Shippers and BCOs will start to shift cargo volumes to carriers who provide visibility and security as a service

1. **Rugged & Weatherproof:** IP67-rated for dust, water, impact, engineered to perform in the harshest field conditions.
2. **Global LTE-M Connectivity:** Reliable, seamless coverage across large geographic areas.
3. **Intelligent Tracking Modes:** Flexible, adaptive tracking profiles tailored to match your specific operations.
4. **Event Monitoring:** Real-time alerts when ensuring full visibility and security.
5. **Wide Operating Range:** Performs reliably from **-20°C to +60°C**, making it ideal for year-round use in all climates.
6. **Advanced Shock Detection:** Monitors and detects impact events up to **±16G**, helping identify mishandling or collisions in transit.
7. **Power Monitoring:** Tracks energy usage based on actual device activity for precise performance insights.
